

Meet our Team

Vasilis Tasiopoulos - Information Security Consultant, Red Team Leader

What was your impression of this years DEFCON event?

Even though I cannot compare it with previous year's Defcon (because this was my first) I can say that it was one of the most interesting and fun conferences that I have ever attended. The DEFCON team did a great job in delivering a successful conference.

At this year's DEFCON 27 there were many talks, villages and parties. Most of all I enjoyed the villages. Villages gave me the opportunity to learn and actually practice new things, and also try to hack technologies that are not easy to find. There were cars, IOT devices, plane simulators, medical devices and more.

What was your role at the event?

I went to DEFCON 27 (Las Vegas) as an attendee. This was my first time at DEFCON and I really tried to gain as much as I could. I cannot say that I was successful enough in that field. DEFCON offered a lot more than I was able to follow. What I really mean is that I tried to do a lot during conference but there is simply not enough time for everything. Next time I will be more prepared!

What effect did the event have on the work you are currently doing?

Throughout the conference we managed to chat with a lot of people that are very active in the Cyber Security field. We exchanged thoughts on Cyber Security, both technical and not. Most of the people at DEFCON were very willing to share their knowledge, their work and their accomplishments, as a result I got a lot of technical knowledge that I can use later. Villages and workshops gave us the ability to test things with technologies that we were unable to find until now. Presentations of new attacks, new tools and researches gave as the ability to be more efficient and up to date with the latest techniques.
