

SERVICE COMPANIES WITH REMOTE WORKFORCES

SASE, THE GAME-CHANGER

NEUROSOFT

Challenges in Service Companies with Remote Workforces:

Organizations operating across diverse locations rely heavily on technology to connect teams and manage operations, but this also creates significant **security** and **networking challenges**. With remote teams accessing sensitive data from various devices, the risk of cyberattacks like phishing and ransomware increases. Traditional VPNs often lack scalability and can cause **performance issues**. Additionally, service companies handling sensitive information are prime targets for **data breaches** and **compliance violations**. As reliance on multiple cloud platforms and SaaS applications grows, enforcing consistent security policies becomes more difficult. Ensuring business continuity and quick recovery from cyber incidents is essential, especially with a dispersed workforce.

The Solution:

Service companies with remote and global workforces face a unique set of challenges that make adopting SASE architecture essential. SASE addresses the **critical security, performance** and **scalability** challenges faced by those companies. By integrating networking and security into a unified, cloud-native solution, SASE provides the **agility, visibility** and **protection** necessary for modern business operations.

SASE's Benefits

Secure, consistent access across multiple regions: SASE provides a unified security and network policy framework for all remote/global offices, ensuring that every location operates under the same security standards and compliance requirements, no matter where it's based.

Enhanced data privacy for distributed workforces: It safeguards data during transmission between offices and remote locations, which is essential for companies managing sensitive information in regions with strict privacy laws.

SASE's Benefits

Centralized visibility and threat detection:

SASE allows security teams to monitor and respond to threats across all locations from a single platform, reducing response times and simplifying management for organizations with dispersed teams.

Scalability to meet growing and changing

workforce needs: SASE's cloud-based infrastructure allows companies to scale resources quickly as they expand remote work capabilities or add new locations, ensuring consistent security and performance across the board.
